

Square-shaped tree grid, available in three sizes, made of 5 mm thick steel sheet with cross decorations, with suitable perimeter and internal reinforcements in 30x4 mm plate. For each version, the corresponding galvanised L-shaped steel profile counter-frame with brackets for cementing can be requested.

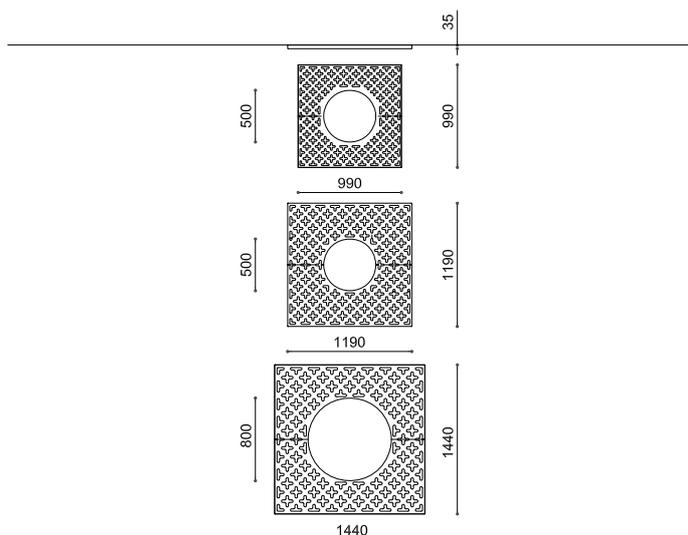

All metal parts are galvanised and coated with thermosetting polyester powder, with the exception of the counter-frame which is supplied in galvanised steel.

All fixings are in AISI304 stainless steel.

Installation by cementing the counter-frame then simply positioning the grid inside.

Galvanised steel frame is a necessary complement (unless in the case of a suitable pre-existing frame).
