Collection of benches with sinuous lines, available without backrest in single or double version, or with high or low backrest and as chaise longue.

The benches of the collection are composed of 40x40 mm hardwood or thermo-treated pine slats fixed to 8 mm thick steel sheet supports and 3 mm thick laser-cut ribs. To reinforce the bench there are additional shaped 3 mm thick steel sheet profiles screwed to the slats.

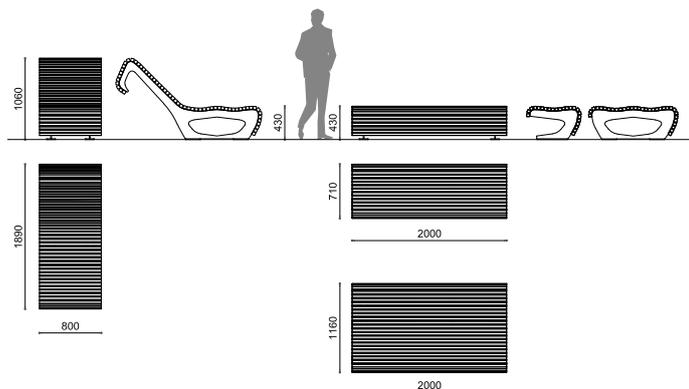

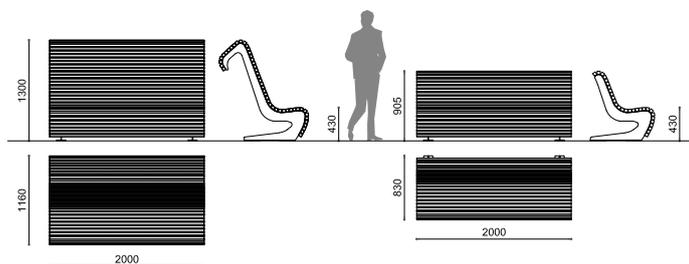

All metal parts are galvanised and coated with thermosetting polyester powder.

The hardwood is treated with water-based pigmented impregnation, while thermo-treated pine is supplied not impregnated (impregnation available as an option).

All fixings are in AISI304 stainless steel.

Fixing to the ground is through an 8 mm thick base plate prepared with Ø 14 mm holes for fixing to the ground through mechanical dowels (not included).
